

J18Software

AngelTrax PC Mobile DVR Playback Software

Product ▼

The J18 playback software simplifies the process of viewing and managing video data. It features an eight channel video display, selectable audio playback and easy to use search functions. With the J18 playback software, observing, archiving and retrieval of data are effortless tasks. View one channel individually or eight channels simultaneously and listen to isolated audio for each channel. The J18 allows for an accelerated search of events by emergency, date and time. It has easy to use image and video archiving features that utilize standard JPEG and AVI file formats. The J18 software can be used to view footage from the AngelTrax Hybrid Component (HC860 and HC860-TR) DVR.
